Indian's Agricultural
Crop Production
Analysis(1997-2021)

Grain (Wheat, rice, maize, pulses and millets), commercial crops (Jute, cotton, sugarcane, oilseeds and tobacco), plantations crops (rubber, coffee, tea, coconut), and horticulture crops (vegetables and fruits) are the four primary crops in India

Agriculture is the backbone of our country's economy. It is the main traditional occupation of our country.

India produces both Kharif and Rabi crops. The main crops produced in India are rice, wheat, maize, jute, sugarcane, other cereals, pulses, spices, cotton, tea, coffee, etc.

It is the source of food and fodder. It also plays an important role in international business in import and export activities.

Indian agriculture began by 9000 BCE on north-west India with the early cultivation of plants, and domestication of crops and animals.

Indian subcontinent agriculture was the largest producer of wheat and grain. They settled life soon followed with implements and techniques being developed for agriculture.

Salient Features of Indian Agriculture

- Subsistence agriculture;
- Pressure of population on agriculture;
- Importance of animals;
- Dependent upon Monsoon;
- Variety of crops;
- Pre dominance of food crops;
- Insignificant place to given Indian crops;
- Seasonal pattern;

Since agriculture provides most of the resources necessary for human life, such as food, fruit, oil, and other necessities, no one can survive without it

The importance of agriculture is huge because it is among the earliest human pursuits and has long been necessary for human welfare and survival.

India is the second largest producer of wheat and rice ,the world's major food staples.

India is currently the world's second largest producer of several dry fruits, agriculture based textile raw materials, roots and tuber crops, pulses, farmed fish, eggs, coconut, sugarcane and numerous vegetables.

It provides employment opportunity to the rural agricultural as well as non-agricultural labourers.
